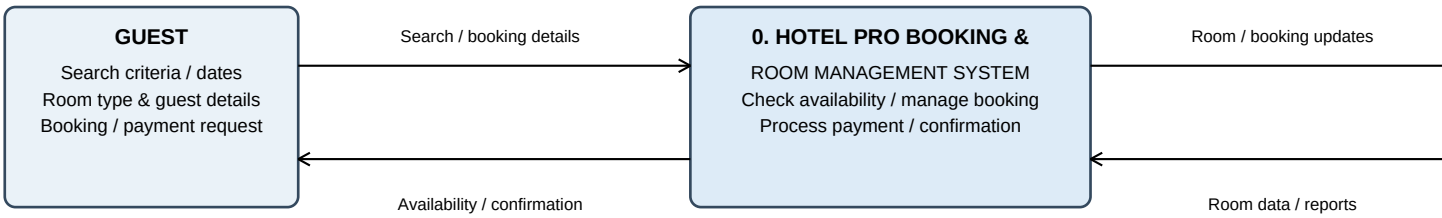
Data Flow Diagrams

A DFD shows how data moves between users, processes and data stores in the Hotel Pro Booking and Management System. Guests search for rooms, make reservations and pay online. Hotel staff/admin manage room information and reports.

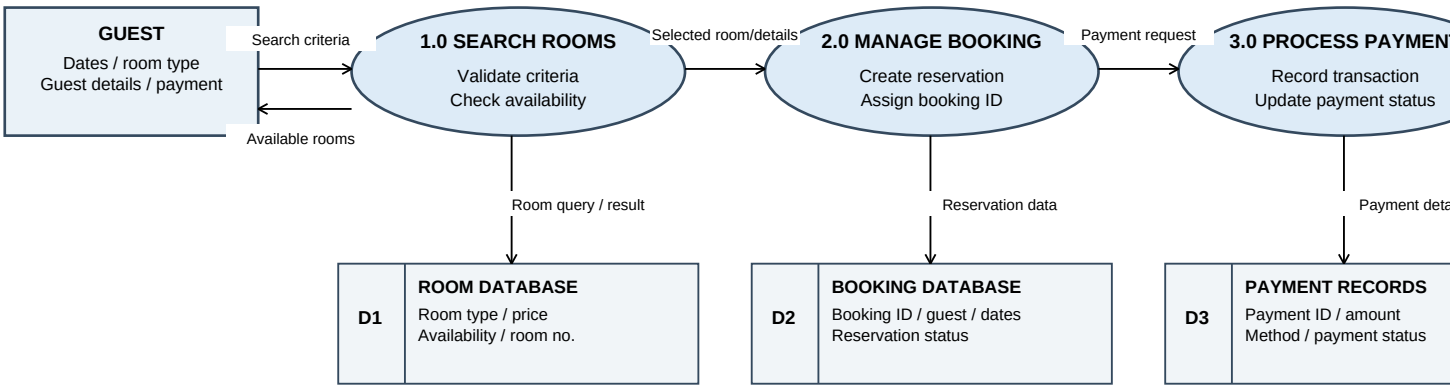
Level 0 DFD (Context Diagram)

The whole application is represented as one process. Rectangles represent external entities and arrows show the labelled data flow.



Level 1 DFD (Detailed Diagram)

The system is divided into three main processes: room search, booking management and payment processing. Room, booking and payment details are stored in separate data stores.



Symbols: rectangle = external entity; circle/oval = process; open-ended store style = data store; arrows = data flow.

Project Design Phase-II

User Stories – Hotel Pro Booking and Management System

User Type	Functional Requirement	User Story / Task	Acceptance Criteria	Priority	Release
Guest	Room Search	As a guest, I can search rooms by dates and room type.	Available rooms match selected dates and filters.	High	Sprint-1
Guest	Booking	As a guest, I can reserve an available room.	Booking ID and confirmation are shown.	High	Sprint-1
Guest	Payment	As a guest, I can pay for my booking online.	Payment status is saved and confirmation is provided.	High	Sprint-2
Hotel Staff	Room Management	As staff, I can update room details and availability.	Updated details appear in room search.	High	Sprint-1
Guest	Cancellation	As a guest, I can cancel or view my reservation.	Booking status is updated correctly.	Medium	Sprint-2
Admin	Reports	As an admin, I can view booking and payment records.	Reports show current stored information.	Medium	Sprint-2

DFD symbol key: External entity = rectangle; process = circle/oval; data store = open-ended rectangle; data flow = labelled arrow.
