Project Design Phase

Problem – Solution Fit Template

Date	27-10-2026
Team ID	
Project Name	Hotel Management and Booking System

Problem – Solution Fit Overview:

The Problem–Solution Fit ensures that the Hotel Management and Booking System addresses key gaps in hotel operations and online room booking, and aligns with the real needs of both guests and hotel staff. This validation is critical before scaling the platform.

Purpose:

- Bridge the gap between guests looking for easy, reliable room booking and hotels seeking efficient operations.
- Offer a unified platform that handles the full stay lifecycle – from search and booking to check-out and billing – without relying on multiple tools.
- Enable secure online payments and transparent billing to build trust.
- Give small and independent hotels visibility and opportunity through online listings and a rating system.
- Improve occupancy and guest satisfaction through real-time availability, automated notifications, and a user-friendly experience.

Problem Statement:

Many guests and hotels face challenges such as:

- Manual record-keeping leading to errors and double bookings
- Scattered tools for reservations, billing, and housekeeping
- Long check-in/check-out times and delays in payment processing
- Difficulty for guests in finding available rooms at the right price
- No centralized reporting, occupancy tracking, and guest feedback system

Solution:

Hotel Management and Booking System, a modern full-stack platform, offers:

- End-to-end reservation management including search, booking, and cancellation
- Real-time room availability and inventory tracking
- Secure online payments with automatic invoice generation
- Automated email/SMS confirmations, reminders, and notifications
- Guest profiles, booking history, and reviews
- Admin dashboard for staff roles, pricing, occupancy reports, and analytics

- Subscription model for hotels with premium features like featured listings, analytics, and multi-property management
